Product Description

× Bybee Holographic AC Adapter

Bring Supercharged Bybee AC Filtering Directly To Your Audio Components

★★★★★ **BEWARE!! The Bybee AC Adapter can alter the space time continuum when activated!**

When I plugged it into my DAC 6 hours had passed in what seemed to be a blink of an eye. Seriously though, this device totally exceeded my expectations in every sense. It's hard to explain. The music was just more...musical. I was able to relax, and hear more of the music without feeling any fatigue after several hours of listening. - *DPB, Scottsdale Arizona*

"In the first five notes, you could easily tell there was something different about this device. My business partner, Lee Matuszczak (an EE and fellow skeptic) was sitting off to the side and could easily hear the differences. With the Bybee, two things hit you immediately- the blackness of the background (something common to most good system conditioners) and the openness and dimensionality of the soundstage." - *Greg Graff, MG Audio Design ([read the review](#))*

The Conditioner For Those Who Don't Like Power Conditioning

The Bybee Holographic AC adapter is a gorgeous, aluminum end capped carbon fiber tube with a high quality

Furutech rhodium copper iec inlet on one end, and a Furutech IEC plug on the other. In between there is a carbon fiber tube that contains the latest Supercharged AC Purifiers from Jack Bybee, and a proprietary ground filter. It is designed to go in-between your audio component's power cord and the component. Placing the conditioning elements as close to your audio component as possible. This provides immediate, direct and NON CURRENT LIMITING filtering of your audio component's incoming AC for maximum effectiveness. There are no capacitors, no resistors, nothing to impede the flow of current flowing to the component.

A Power Conditioner For Each Component, Right At The Point Of AC Entry

Imagine, a power conditioner for each individual component in your system. One with no current limitations or additional switches and LED's to add extraneous noise. One that offers the finest, best noise reduction for each individual component in your system. One that allows you to use whatever power cord works best with your system without changing the tone or characteristics of the cord. If you are looking for the best AC filtering for your top performing audio component, you've found it. We challenge you to try it and say we are wrong!

Construction (Stock AC Adapter)

IEC inlet & plug - The Turbo Version of the Bybee AC Adapter uses Furutech's NCF (Nano Crystal Formula) FI-50NCF and FI-06 NCF. They feature rhodium plated Pure Alpha copper connectors, and EMI RFI absorbing materials in the body. Folks, these are the absolute quietest, best sounding connectors we have ever used. They are not subtle!

Email Newsletter Signup

- ✕ The male IEC features Furutech's Pure Transmission FI-50 Piezo Ceramic series connector body and housing. Both the male and female IEC's are coated/embedded with nano particles that are highly effective at passively reducing EMI and RFI.

Wire - We use 10 awg, stranded annealed copper. By itself it has a gorgeous midrange, and coupled with the Bybees it is super dynamic, transparent, and holographic. There is body and transparency without ANY fatigue factor. We couldn't think of a better compliment to the Holographic AC Adapter.

Body of The Holographic - We machine our own aluminum end caps for the carbon fiber tube we use to contain the Supercharged AC Bybee Purifiers and our proprietary ground filter. This is expensive and time consuming, but very worth it. It gives the adapter a very elegant, finished look.

The Turbo Version

Last, we incorporate Stein's E-Pad +S in between the hot, neutral and ground legs of the AC adapter to enhance the effectiveness of the Bybee and ground filter conditioning.

The end result is an even quieter, organic, more resolving presentation than the stock AC Adapter.

Where to use the Bybee Holographic AC adapter

The Bybee Holographic AC Adapter can be used on any audio component that accepts aftermarket power cords. Simply plug the power cord into the back of the aluminum end capped carbon fiber cylinder, then plug the carbon fiber IEC plug into the back of your component. We recommend you start at your source components first, then your amp(s), then your preamp. It works phenomenally well on subwoofers too.

For those of you concerned with losing dynamics from a standard power conditioner, the Bybee Holographic AC Adapter will allow you to filter and improve your audio component's incoming AC, without taking a chance on losing dynamics through the common filters used in most AC conditioners. We don't use common filters...

What can I expect to hear?

More textures in the music, more decay, air, space, dynamics, musicality. Any more audiophile buzzwords? Yes! Way better bass reproduction with more finesse, tunefulness and impact. What is most amazing is how you can have more body, and more transparency with less fatigue factor. So often you sacrifice body for resolution, or gains in transparency for loss of bass weight or midrange body. What the AC adapters do is nothing short of an audiophile miracle. You achieve an organic, non-electronic flow and ease to the music. You have midrange richness, fullness along with bass weight and slam. Last, you have incredible gains in low-level resolution that give you that wrap-around holographic imaging. It will take ANY power cord, no matter how good, and make it better. We guarantee it. Why not try one for yourself with our In-Home Audition Program?

How Long Does it Take To Make One?

These are hand-made, custom machined and painstakingly hand assembled products made in Colorado. It will take approximately 2-3 weeks from date of order until your Holographic AC adapter is delivered.

Is there a Warranty?

Yes. We warranty the adapter to be free from defects for 5 years. This does not cover abuse or misuse of the product such as excessive, repeated twisting of the cable.

Is There a 30-Day Money Back Guarantee?

Yes, we absolutely guarantee you will love the Bybee Holographic AC Adapter or you can send it back for a refund of the purchase price.

✕ Is There an In-Home Trial?

Yes. You can try one in your own audio system over the course of a weekend plus a few days. Contact us at 303-653-6341 or email us by clicking on the Contact The Geeks tab in the lower, right-hand section of your browser.
